

GROSS SCIENCE-Y SPEWING TOILET ROLLS

Make your own mini science horror movie with this fun, freaky and really gross science experiment!

Transform some humble toilet rolls into Snotty, Vomitron & Brain Fry and bring the bicarbonate of soda and vinegar reaction to life!

WHAT YOU NEED

- Toilet Rolls (3)
- Bicarbonate of Soda
- White Vinegar
- Food Colouring (3 colours)
- Play Dough
- Marker Pen
- Scissors
- Baking Tray

INSTRUCTIONS

Step 1

Get creative drawing faces on your toilet roll tubes! Then ask an adult to cut out a hole for the nose on one (now **SNOTTY**), then a mouth on another (now **VOMITRON**) and a shocked look on your third toilet roll, no cutting required (now **BRAIN FRY**)!

Step 2

Use a piece of play dough to mould a base for each toilet roll tube - so that the toilet rolls are held in place and don't fall over.

Step 3

Fill about a third of each tube with bicarbonate of soda & add a couple of drops of food colouring to each of the toilet rolls - **SNOTTY**, **VOMITRON** and **BRAIN FRY**.

Step 4

Now get creative and act out a mini science horror movie with your three spewing toilet roll characters. Then when you're ready, pour in some vinegar into each toilet roll and watch them spew! Ewww gross!
